

MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE

DOMINION OF CANADA

MARCH 1934

TEMPERATURE

From western Manitoba to the Pacific coast the month was considerably warmer than a normal March, while the eastern part of the Dominion was mostly below normal temperature.

Over the greater part of the western grain region the excess was four to eight degrees. Exceptions were the Peace River country where the temperature varied from normal to three degrees above and eastern Manitoba where the temperature varied from normal to two degrees below normal.

In British Columbia there was an excess of three to five degrees over practically the whole of the province. In the northern Yukon the temperature was about normal but in the Mackenzie valley and across Great Bear Lake to the Arctic coast there was apparently an excess of three to six degrees.

In southern Ontario there was a deficiency of one or two degrees in the Lake Ontario counties and the greater part of the upper Ottawa and lower St. Lawrence valleys. In the Lake Huron counties and those bordering on western Lake Erie the deficiency was three to five degrees. From the Lake of the Woods eastward across northern Ontario the deficiency was two to three degrees.

Along the height of land in Quebec the deficiency was four to five degrees or more but along the St. Lawrence valley from Montreal to the Saguenay the deficiency was only two or three degrees. Part of the Gaspé Peninsula was slightly above normal.

In northern New Brunswick and the islands of the Gulf of the St. Lawrence the deficiency was three to five degrees. Locally on the Bay of Fundy, the Basin of Minas and on Prince Edward Island the temperature was slightly in excess of normal. Elsewhere in southern New Brunswick and Nova Scotia the deficiency was about one degree.

In the Hudson Bay region the deficiency was two to five degrees.

PRECIPITATION

In some parts of Vancouver Island there was an excess over normal precipitation of thirty to fifty per cent. In the interior of British Columbia there was both excess and deficiency.

Over the western grain region precipitation was mostly deficient. In southern Alberta, however, there was a considerable excess.

In Ontario the total precipitation did not vary much from normal. For the most part there was a slight excess in the region of the Lower Lakes and the upper St. Lawrence and a small deficiency in the Upper Lake region.

In Quebec there was a slight excess along the St. Lawrence valley as far as the Gaspé Peninsula. In northern Quebec there was mostly a moderate deficiency.

In Nova Scotia precipitation was deficient by five to forty per cent. except locally in the Annapolis valley where moderate excesses occurred. Over the greater part of New Brunswick and in Prince Edward Island there was an excess of five to fifty per cent. In northern New Brunswick and locally in the valley of the St. John River there were small deficiencies.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month; Column Sg denotes depth of snow on ground in inches, where given.
